*The World's Finest Kitchen Cabinet*

BUILT LIKE FINE FURNITURE

*Catalog Number 23*  
COPPES BROTHERS & ZOOK  
NAPPANEE • INDIANA

### Model A

Height, 72 inches.  
Sliding Table, 27 x 40.  
Depth of Base, 24 inches.

## MODEL A

**H**AS full rounded corners and edges, gravity latches, patent flour bin, bill hooks, cook book holder with groove for pencil. Extract rack, change and milk ticket holder, daily reminder and rack for tea and coffee jars on upper cupboard doors. Square spice and coffee jars held in place by a nickel band. Patent sugar-jar valve and lump crusher. Hard Maple cutting and chopping block. Compartment for silver-ware in linen drawer. Ventilated food chamber with sliding wire shelves. Sliding bottom in base with rack for lids and covers on door. Equipped with aluminum or porcelain sliding table.

### VENTILATED FOOD COMPARTMENT

The ventilated food compartment in the base of Model A is one of the distinctive features of this model Dutch Kitchenet. Warm baked goods may be stored there without the danger of becoming soggy and they are also protected from dust and insects. The tendency of cool air to fall and warm air to rise causes a circulation down between the special partitions of the side wall of the base and up through the food compartment.

### CHOPPING BLOCK

The chopping block in the Models A and J is one of the many conveniences found only in Dutch Kitchenets. It is made of heavy Maple and bolted together and strong enough to stand the hardest usage. Can be easily removed and placed on the table top to chop meats or cut bread.

### Model J

Height, 72 inches.  
Sliding Table, 27 x 48.  
Depth of Base, 23 inches.

## MODEL J

THIS model will be found very practical where there is plenty of kitchen room, being built extra large—forty-eight inches wide. The equipment is the same as in Model A except that it has drawers in the place of the ventilated food compartment in the base. The sugar, spice and salt jars are placed in the middle lower compartment of the upper cupboard, leaving a large cooling and storage compartment at the right. The two large drawers in the base are interchangeable, and one is partitioned as in Model A.

### THE PATENTED FLOUR BIN

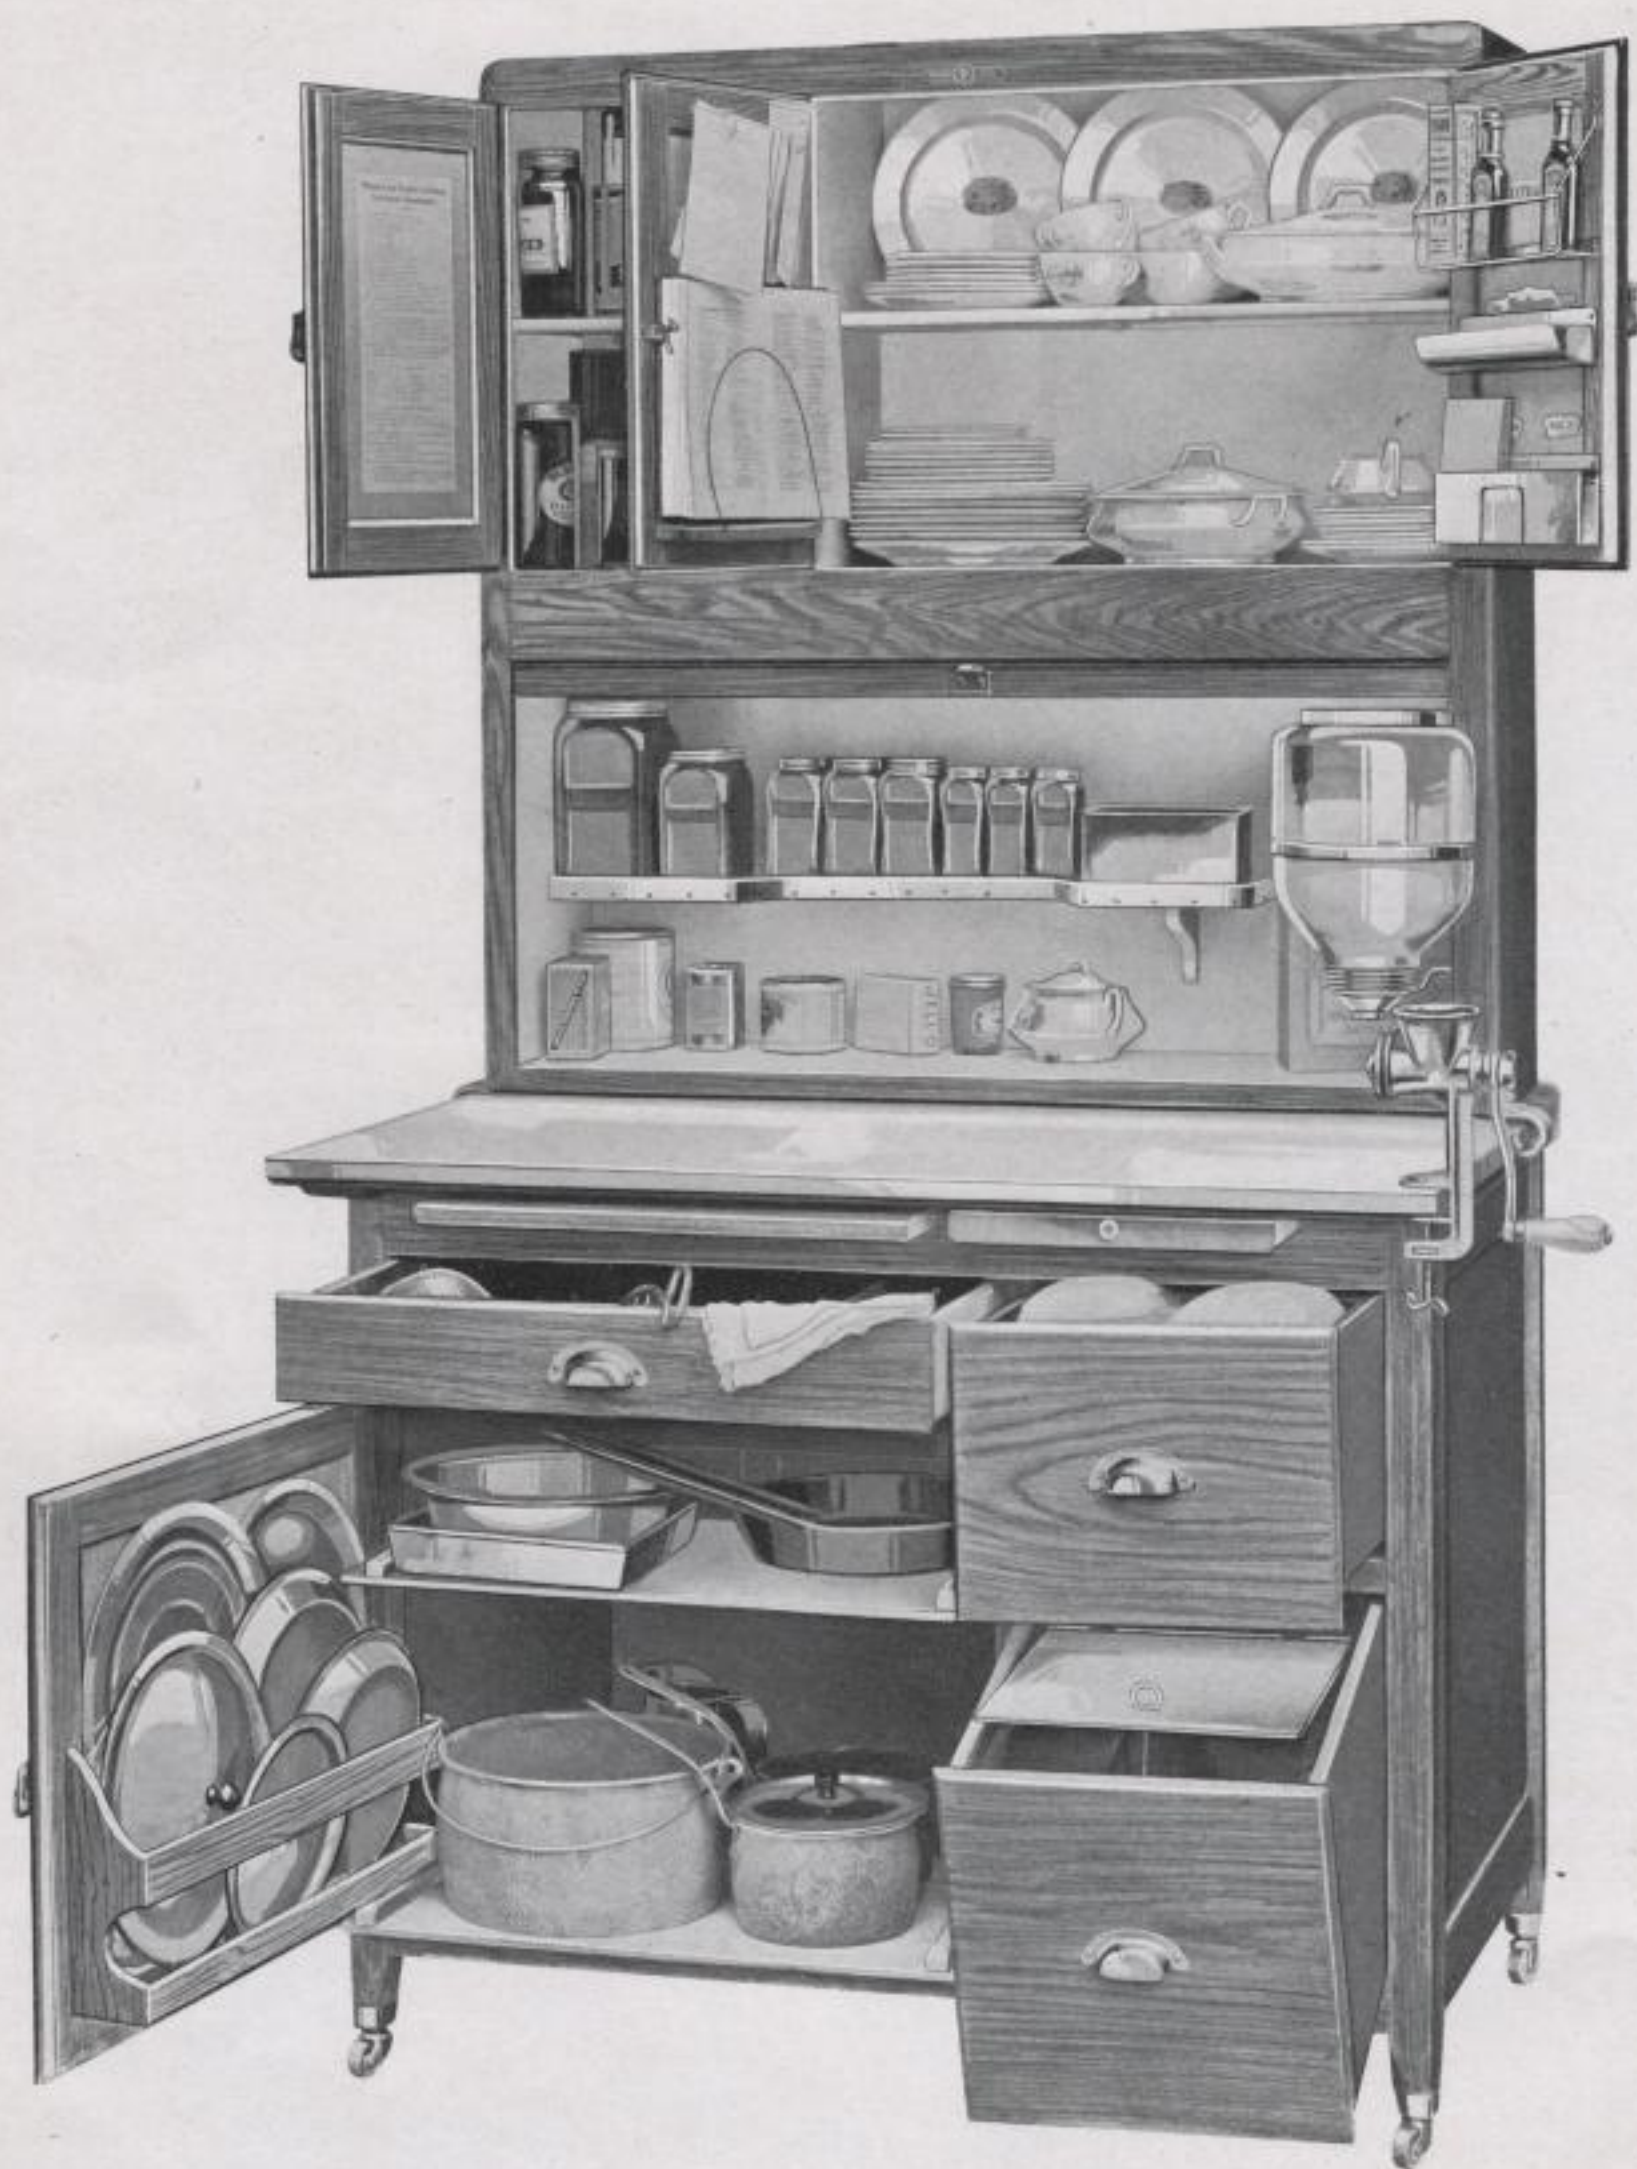

Another distinctive feature of the Dutch Kitchenet is the patented flour bin. Rubber bumpers on the corners protect the table when the bin is lowered. With the lid in place the bin is closed air tight, and when it is filled with flour it is very easily tipped back into place. When necessary to clean or air it is simply lifted out. There are no springs or machinery of any kind to get out of order.

### THE DAILY REMINDER

The daily reminder on the upper left hand door of the upper cupboard shows a list of weights and measures in ordinary use by housekeepers and contains a list of seventy-four articles and foods, each having an indicator which slides into place by using the finger or the point of a pencil.

### Model E

Height, 72 inches  
Sliding Table, 27 x 40.  
Depth of Base, 23 inches.

## MODEL E

THE general construction of this cabinet is the same as the Model G except that it has the flour bin in the lower right hand corner of the base. The user can sift her flour, or not, as she wants, and easily throw back into the bin any unused flour. This arrangement brings the bread-box above the flour bin and is considered by many housekeepers to be a more convenient position than the conventional location at the bottom of the cabinet. The bin in the base gives a separate compartment for package goods in the upper cupboard and gives an extra large work compartment clear across the front of the cabinet. The metal flour bin in the base works very easily on a carrier and is easily and quickly removed for cleaning.

### GOOD CONSTRUCTION IN DUTCH KITCHENETS

Good construction in a kitchen cabinet is more essential than in any other piece of furniture because of the fact that it is subjected to sudden and extreme changes in temperature and moisture in the atmosphere. By using only materials and lumber of the highest grade, having factories equipped with the latest and most improved machinery, operated by men skilled in turning out high-class work, the manufacturers of Dutch Kitchenets are able to offer to the dealer and the housekeeper a cabinet of exceptional merit.

### Model G

Height, 72 inches.  
Sliding Table, 27 x 40.  
Depth of Base, 23 inches.

### Model K

Height, 72 inches.  
Sliding Table, 25 x 40.  
Depth of Base, 21 inches.

## MODEL K

THIS model has the same rounded corners, patent flour bin, sugar-jar valve, door equipment, sliding bottom in base, etc., as in the Model G. It is equipped with either porcelain or aluminum table.

### SUGAR-JAR VALVE

The sugar-jar valve used in all models is a specially constructed, distinctive Dutch Kitchenet feature. A valve is used which opens and closes through a groove in such a manner that it is impossible for any sugar to get under and clog it. A breaker attachment pulverizes all lumps.

### SLIDING BOTTOM

The sliding bottom in the base used on Models A, J, E, G and K rides on runners instead of sliding on the entire surface, which greatly reduces the friction when pulled out loaded with utensils.

### ATTRACTIVE APPEARANCE

Rounded corners and edges, along with the smooth roll curtain, panels and ends, leaving the least possible number of ledges to collect dust and dirt, give a simplicity of design and an attractive appearance found only in Dutch Kitchenets—The World's Finest Kitchen Cabinet.

### GREAT SELLING PROPOSITION

The workmanship and materials that go to make a Dutch Kitchenet are far above the average in kitchen-cabinet construction. This fact, together with the many exclusive features found only in these cabinets, and the absolute guarantee of the manufacturer combined with the guarantee of the dealer, makes a merchandising proposition not equalled by any other cabinet on the market.

Model Z  
 Height, 72 inches.  
 Sliding Table, 25 x 40.  
 Depth of Base, 21 inches.

## MODEL Z

FOR the trade demanding a moderate-priced cabinet this is a very popular model. The construction and materials used are as good as that in the higher grades, but it is more simple in design and equipment. It has a tilting flour bin, patent sugar-jar valve, Colonial tea, coffee and spice jars, wood shelf and rack for lids and covers in base, rounded corners and edges, egg-shell white enamel finish in the interior of the upper cupboard. It has the same equipment on the upper cupboard doors as the Model K.

### MODEL A (CLOSED)

A closed "Dutch Kitchenet" presents a most attractive appearance and harmonizes nicely with the other fixtures of the modern kitchen. With smooth panels and ends, rounded corners and edges, and the smooth roll curtain described elsewhere in this catalog, there is little chance for dust and dirt to collect on this cabinet and the smooth surfaces are very easy to keep clean. The base is supported by tapered legs, ferruled, and is high enough to sweep under. Latches, hinges and drawer pulls are of the best quality, nickel-plated. The latches are of the gravity type, which assure them operating perfectly throughout the life of the cabinet as there are no springs or other mechanism to get out of order.
